

HEAPS to choose from

Automation

Imagine a future where robots rule the world. Industrial robots are becoming more viable and efficient for all kinds of production.

Marine Engineering

Marine engineering technicians work in a practical way in jobs connected with the sea.

Heavy Engineering

Heavy Engineering involves thinking big and heavy - big structures, cranes to lift heavy components, laser cutters...

Fabrication

Fabrication is the process of cutting, bending and assembling light metal structures like cabinets, furniture...

Tool Making

Tool and Die makers are among the most highly skilled workers in manufacturing.

Manufacturing

Manufacturing Engineers develop products and build systems to produce them.

Processing Lines

Process engineering involves the building of process lines for manufacturing or food processing.

About Us

EDI (Engineering Dunedin Inc) is a group of Engineering Companies who, in conjunction with the DCC Economic Development Unit and the Otago Polytechnic, have come together to promote the Engineering Industry. Due to strong growth in the Engineering Sector and a shortage of skilled labour, EDI focuses on promoting Engineering Careers to school leavers and practically-minded people as a safe and rewarding career choice.
